MONITOR DEVICE FOR COMPUTER SYSTEM

FUJITSU LTD

Inventor(s): SHIMIZU TAKANORI ;YOSHIDA KAZUTORI ;MORIMOTO TOSHIHIRO

Application No. 06158863 JP06158863 JP, Filed 19940711,

Abstract: PURPOSE: To correctly and speedily grasp a fault state by properly and clearly displaying fault information according to a fault occurring to a peripheral equipment, etc., constituting the electronic computer system to be monitored.

CONSTITUTION: A menu control part 26 displays a menu for the fault state on a monitor display 24. The menu control part 26 displays a user selection menu by referring to a user table storage part 27 and controls the display attribute of the user selection menu according to the fault state. Further, when a specific user is selected in the user selection menu, the menu control part 26 displays a system constitution menu showing the device constitution diagram of the corresponding user system by referring to an I/O table storage part 28 and controls the display attribute of a constituent device according to the fault state. When a specific constituent device is selected in the system constitution menu, a device information menu and further a detailed information menu showing detailed information corresponding to the constituent device are displayed.
